(Tobacco Cultivation, Chewing Tobacco, Cigarettes, Bidi, Cigars, Khaini, Zarda, Gutka, Katha, Mouth Freshner, Pan Chatni, Kimam, Sweet Supari, Nicotine Sulphate, USP Nicotine, Nicotine Tartarate, Nicotine, Polacrilex Resin)

₹1975/- \$200-

Tobacco comes from a leafy plant that tends to grow in warm tropical areas. It is famously grown all over the Caribbean, where the warm, sunny conditions make for a perfect growing climate. Tobacco is usually smoked as a nicotinic stimulant and is mostly processed, rolled and dried before being smoked. Different geographies produce different types of the plant. The taste and flavor of the leaves are the characteristic trademarks of different types. The process of curing also determines the type of tobacco. Tobacco products include cigarettes, cigars, loose pipe tobacco, chewing tobacco, and snuff. These products contain the dried, processed leaves of the tobacco plant *nicotiana rustica* or *nicotiana tabacum*. All tobacco contains nicotine, an addictive drug. Today's tobacco also contains thousands of other chemicals designed to make the products more user-friendly and addictive. Nicotine is a nitrogen-based compound which dissolves in organic compounds. Tobacco leaves contain plenty of nicotine which evaporates on burning. This nitrogen-based compound is addictive in low amounts and toxic in high doses. Nicotine Sulfate is a potent pesticide, known for its high toxicity.

A large proportion of Indian economy is agro based in which Tobacco is one of the principal cash crops. The tobacco production and its allied products' sales in the country have played a prominent role in the development of nation's economy. India is the largest tobacco market in the world in terms of tobacco consumption. The smokeless tobacco has historically been served as a tradition in India for many decades.

Tobacco Waste or dust is generated at various stages of post-harvest processing of tobacco and also while manufacturing various tobacco products mainly during manufacture of tobacco products like cigarette and Beedi. The types of wastes generated during pre and post-harvest practice of tobacco include suckers, stems, mid ribs, leaf waste and dust.

The main contents of the book are Tobacco Cultivation, Tobacco Diseases and Pests, Organic Tobacco Production, Chewing Tobacco, Cigarettes, Bidi, Cigars, Readymade Khaini, Chewing Tobacco (Khaini), Zarda, Gutka, Katha, Mouth Fresheners, Pan Chutney, Pan Masala, Kimam, Tobacco of Various Grade, Sweet Supari, Nicotine Sulphate, USP Nicotine, Nicotine Tartarate, Nicotine Polacrilex Resin, Smokeless Tobacco (SLT), Hookah, Tobacco Products Manufacturing Processes, E-Liquid (Main Chemicals, Compounds, Components), Additives in Tobacco Products, Additives Products, Packaging & Labeling (Design Trends & Technologies), Plastics in Food Packaging, Packaging Laws and Regulations and Photographs of Machinery with Supplier's Contact Details. This book will be a mile stone for its readers who are new to this sector, will also find useful for professionals, entrepreneurs, those studying and researching in this important area.

Handbook on Manufacture of

Indian Kitchen Spices (Masala Powder)

with Formulations, Processes and Machinery Details

(4th Revised Edition)

₹1825/- \$150-

Spices or Masala as it is called in Hindi, may be called the "heartbeat" of an Indian kitchen. The secret ingredient that makes Indian food truly Indian is the generous use of signature spices. From ancient times of the maharaja's, spices have added unforgettable flavours and life to Indian cuisine. Indian spices offer significant health benefits and contribute towards an individual's healthy life. There are a large number of various spices, used along with food such as Chilli (Mirchi), Turmeric (Haldi), Coriander (Dhania), Cumin (Jeera), Mustard (Rai), Fenugreek (Methi), Sesame (Til), Cardamon, Peppercorns (Kali Mirchi), Clove, Fennel (Saunf), Nutmeg and Mace etc.

In modern times, international trade in spices and condiments have increased dramatically which could be attributed to several factors including rapid advances in transportation, permitting easy accessibility to world

Handbook on Printing Technology

(Offset, Flexo, Gravure, Screen, Digital, 3D Printing with Book Binding and CTP)

4th Revised Edition

₹1675/- \$150-

Printing is a process for reproducing text and image, typically with ink on paper using a printing press. It is often carried out as a large-scale industrial process, and is an essential part of publishing and transaction printing. Modern technology is radically changing the way publications are printed, inventoried and distributed. Printing technology market is growing, due to technological proliferation along with increasing applications of commercial printing across end users.

In India, the market for printing technology is at its nascent stage; however offers huge growth opportunities in the coming years. The major factors boosting the growth of offset printing press market are the growth of packaging industry across the globe, increasing demand in graphic applications, the wide range of application in various industry, and industrialization. 3D printing market is estimated to garner \$8.6 billion in coming years. The global digital printing packaging market is expected to exceed more than US\$ 40.02 billion by 2026 at a CAGR of 13.9%. Computer-to-plate systems are increasingly being combined with all digital prepress and printing processes.

This book is dedicated to the Printing Industry. In this book, the details of printing methods and applications are given. The book throws light on the materials required for the same and the various processes involved. This popular book has been organized to provide readers with a firmer grasp of how printing technologies are revolutionizing the industry.

The major content of the book are principles of contact (impression), principles of noncontact printing, coated grades and commercial printing, tests for gravure printing, tests for letterpress printing, tests for offset printing, screen printing, application of screen printing, offset lithography, planography, materials, tools and equipments, sheetfed offset machines, web offset machines, colour and its reproduction, quality control in printing, flexography, rotogravure, creative frees printer, shaftless spearheads expansion, digital printing, 3D printing, 3D printing machinery, book binding, computer-to-plate (ctp) and photographs of machinery with suppliers contact details.

A total guide to manufacturing and entrepreneurial success in one of today's most printing industry. This book is one-stop guide to one of the fastest growing sectors of the printing industry, where opportunities abound for manufacturers, retailers, and entrepreneurs. This is the only complete handbook on the commercial production of printing products. It serves up a feast of how-to information, from concept to purchasing equipment.

ABOUT US

NIIR PROJECT CONSULTANCY SERVICES (NPCC) AN ISO 9001: 2015 CERTIFIED COMPANY is one of the leading players in the industry endowed with the expertise, sound technical knowledge and intellectual asset. NPCC is a repository of reliable professional information for the entrepreneurial fraternity of India and has well experienced professionals in market research comprising of consultants, experts, field executives, researchers and analysts from different industries and sectors. We strive to provide a global platform for the entire entrepreneurial ecosystem by providing right project for investment, market survey studies and research through our advanced industrial, business and commercial databases.

NPCC offering integrated technical consultancy services. Its various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, Cost and Revenue, Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Investment Opportunities, Preparation of Project Profiles / Pre-Investment and Pre-Feasibility Studies, Market Surveys / Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Section of Plant /Process / Equipment, General Guidance, Technical and Commercial Counseling for setting up new industrial projects.

NPCC also publishes various books, directories, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and consultancy firms as one of the input in their research.

We at NPCC want to grow with you by providing solutions scale to suit your new operations and help you reduce risk and give a high return on application investments. We have successfully achieved top-notch quality standards with a high level of customer appreciation resulting in long lasting relation and large amount of referral work through technological breakthrough and innovative concepts. A large number of our Indian, Overseas and NRI Clients have appreciated our expertise for excellence which speaks volumes about our commitment and dedication to every client's success. Transparent LPG Cylinder from Fiber Glass

A gas cylinder is a pressure vessel for storage and containment of gases at above atmospheric pressure. High-pressure gas cylinders are also called bottles. Inside the cylinder the stored contents may be in a state of compressed gas, vapor over liquid, supercritical fluid, or dissolved in a substrate material, depending on the physical characteristics of the contents.

Global composite cylinders market stood at \$ 601 million in 2018 and is projected to reach \$ 921 million by 2024, exhibiting a CAGR of over 7% during 2019-2024, owing to increasing demand for explosion proof, non-corrosive and lightweight LPG cylinders. Composite cylinder is a high-pressure vessel that is made of a composite-polymer material and placed in a plastic body. The technology of manufacturing a modern composite cylinder is a very complex and high-tech process, thus its cost is much higher than the cost of a metal analogue. Increasing consumption of LPG in the developing countries is expected to boost the demand.

SELECTED PROJECTS FOR YOU

Indian LPG imports have been registering some remarkable trends in the last 10 years. The growth trends over the last 10 years, 5 years and 1 year are: 17% CAGR (FY07 to FY17), 14% CAGR (FY12 to FY17) and 23%. At nearly 11 million tonnes in FY17, India surpassed Japan's imports at 10.6 million tonnes. Increasing demand for lightweight, explosion proof and non-corrosive LPG cylinders and government push towards the usage of composite cylinders are some of the major drivers of the market. Increase in the consumption of LPG in the developing economies further elevate the demand for composite LPG cylinders over the next five years. As a whole any entrepreneur can venture in this project without risk and earn profit.

Layer Paratha (Frozen)

Paratha is a kind of unleavened flatbread, which is made of atta flour. The flavor of paratha is various. Sometimes, people mix stuffing with flour and knead them together such as gobiparatha or makkaparatha. Sometimes, they prefer having a plain paratha and eating with side dishes like aloo, or stuffed paratha with keema, chana dal, etc. As for dessert, sugar paratha has never been forgotten. It is the best time to taste them while they are cooked.

The processed and frozen food market is seeing a steady growth in demand both in India and the world over, particularly in the developing Asian countries. Globally, the frozen food market is expected to reach \$309.98 billion, growing at a compound annual growth rate (CAGR) of 6.15 per cent by 2021. Developing markets like ours are likely to experience a higher growth. India's frozen food market, which stood at \$310 million in 2017, is projected to grow at a CAGR of over 16 per cent to reach \$754 million by 2023.

Though frozen food is gaining in popularity, particularly in North, it still has a limited audience due to unhealthy tag segment carries, which is an extension from the more substantial processed/packaged food. Indian frozen food market growing at 15-20% CAGR in the last four years.

This growth was mainly due to more working women, young professionals living alone and greater exposure to western

food patterns making consumers to go for food fried, baked or toasted straight from the freezer. The consumption of processed and frozen food has also increased because of growing income of the middle class people in recent years as frozen food provides good food with lesser cooking time. As a whole any entrepreneur can venture in this project without risk and earn profit.

Moringa Leaf Tablets

Moringa is grown in home gardens in West Bengal and Odisha and as living fences in southern India and Thailand, where it is commonly sold in local markets. In the Philippines and Indonesia, it is commonly grown for its leaves which are used as food. Moringa is also actively cultivated by the World Vegetable Center in Taiwan, a center for vegetable research. In Haiti, it is grown as windbreaks and to help reduce soil erosion. More generally, moringa grows in the wild or is cultivated in Central America and the Caribbean, northern countries of South America, Africa, Southeast Asia and various countries of Oceania.

The Global Moringa Products Market is expected to register a CAGR of 9.3% and reach USD 7902.9 Million by 2025. Moringa manufactured goods such as powders, oils, capsules, tablets, soaps, and seeds are acquired from separate parts of the moringa tree. The global moringa products market is projected to expand at a considerable rate over the last few years owing to the health advantages related with the products obtained from the tree. The ever-increasing use of moringa products is changing the number of moringa growers in the market. It is understood to have several advantages and it utilizes variety from health and attraction to helping prevent and cure illnesses.

Growing awareness regarding the medicinal benefits of moringa-based products is projected to propel industry growth. Moringa flowers, seeds, pods, leaves, gum, and bark have properties to relieve vitamin and mineral deficiencies, promote normal blood glucose levels, provide support for a healthy cardiovascular system, body's anti-inflammatory mechanisms, and immune system, and neutralize free radicals, andenrichanaemic blood. They have potential benefits to overcome malnutrition, lactating mothers,

Catenary Wires and Conductors used in Railway Electrification

Catenary wire (also called a messenger wire) has closely spaced drops which support the actual contact wire. The messenger (or catenary) wire needs to be both strong and have good conductivity. They used multi-strand wires (or cables) with 19 strands in each cable (or wire). Copper, aluminium, and/or steel were used for the strands. All the 19 strands could be of the same metal or some strands could be of steel for strength with the remaining strands of aluminium or copper for conductivity. Another type looked like it had all copper wires but inside each wire was a steel core for strength.

The India structured cabling market was valued at \$419.4 million in 2017 and is forecasted to witness a CAGR of 12.9% during 2018–2023. Growing demand for copper cables, surging data center market, increasing number of product launch activities, and rising demand for better bandwidth are supporting the structured cabling market growth in India.

The growing trend in building, construction and automobile sectors is expected to keep demand of copper high. Understanding the copper technology involved in copper production, exploration, mining, and the uses of copper, as well as the global industry structure would impact copper mining, the environment, the various markets of copper, etc. The industry is affected by the price trends of copper, market performance, import/export scenario, the physical market trends, demand for copper, and of course, a market forecast. Growing domestic market, priority for infrastructure development, improved life-style and newer opportunities, have propelled the Indian copper industry, especially for wires and cables. Active Zinc Oxide from Zinc Ash, Secondary Zinc Waste & EAF Dust

Active Zinc oxide is a chemical compound with formula ZnO. It occurs as white hexagonal crystals or a white powder commonly known as zinc white which is used as a pigment in paints. It is nearly insoluble in water but soluble in acids or alkalis. Chinese white is a special grade of zinc white and used in artists' pigments. Zinc oxide and stearic acid are important

ingredients in the commercial manufacture of rubber goods. Active Zinc oxide is valuable and growth-oriented product both for direct application and production of other zinc compounds. Two main processes for producing Active zinc oxide are direct and indirect methods. In the direct or American method, zinc ore is heated in air with coke or anthracite, and the resulting zinc vapors are subjected to the controlled oxidation. In the indirect or French process the zinc vapors to be oxidized are obtained by boiling zinc.

The global Active zinc oxide (ZnO) market size is projected to grow from USD 4.4 billion in 2019 to USD 5.7 billion by 2024, at a compound annual growth rate (CAGR) of 5.4%, during the forecast period. ZnO is a white inorganic compound that is used widely in pharmaceuticals, rubber, ceramics cosmetics, chemicals, and glass industries. The growth of these end-use industries is expected to fuel the global Active zinc oxide market demand over the forecast period.

Rising application of product in paints and coatings is projected to drive the Active zinc oxide market growth. One trend in the market is increasing use in semiconductor industry. The growing demand for Active zinc oxide in the production of varistors, ferrites, and solar cells is expected to propel the growth of the global Active zinc oxide market in the forecast period. The major driver in the market is growing demand for Nano Active zinc oxide. Nano Active zinc oxide is a specialized nanomaterial that is mainly available in the form of dispersions and powders. Companies operating in the Active zinc oxide market are also focusing on new product development and agreement to tap the opportunities in applications, such as solar energy, surface coatings, and pharmaceuticals. The Europe market is mature and developed stably in the past few years and will keep the trend in the next years. North America, led by the U.S. is expected to account for substantial growth in the market during the forecast period. Essential Oil (Lemongrass, Citronella, Lavender, Rosemary and Peppermint)

Essential oils, also called volatile odoriferous oil, are aromatic oily liquids extracted from different parts of plants, for example, leaves, peels, barks, flowers, buds, seeds, and so on. They can be extracted from plant materials by several methods, steam distillation, solvent extraction, and so on. Among all methods, for example, steam distillation method has been widely used, especially for commercial scale production. Essential

oils have been widely used as food flavors. Essential oils found in many different plants, especially the aromatic plants, vary in odor and favor, which are governed by the types and amount of constituents present in oils.

India essential oils market will surpass USD 790 million up to 2024. Adoption of sustainable agriculture techniques which has led to large scale production raw materials including lemongrass, citronella, lavender, rosemary and peppermint for oil extraction will propel industry growth.

The increasing importance of natural extracts as pharmaceutical & natural cosmetic aid and their use as nutraceutical ingredients in recent times has opened up new vistas for this sector besides their widespread use as favor & fragrance ingredients. India will play a dominant role in the production & processing of these natural extracts. Country's biodiversity coupled with competent scientific force, make our country as the best choice to become a foremost leader in aroma business in the coming years.

The world's total production of essential oils is estimated at about 1,00,000-1,10,000 tons and India stands at No. 3 contributor with a share of 16-17 percent. In value terms India's position is No.2 with the share of 21-22 percent, thanks to mint revolution in North India. Talc from Talc Ore (Cosmetic Grade)

Talc is a naturally-occurring mineral used in some consumer products, including personal care products like cosmetics. Pure talc and talc-containing rock are mined from the earth. Talc is made up of magnesium, silicon, oxygen and hydrogen. Its physical properties make it one of the softest naturally occurring minerals. There are different grades of talc, with varying degrees of purity (or presence of other minerals). Talc is milled to different particle sizes, with the finest talc used in cosmetics, pharmaceuticals, and some food products. Talc Market was valued at USD 2.57 billion in 2017 and is projected to reach

Moreover, burgeoning demand for lightweight plastic components of vehicles made from talc reinforced polypropylene to enhance vehicle performance, fuel efficacy, and durability will impel the business scope. Beneficial features such as corrosive resistance and resistant against abrasiveness is anticipated to make talc more popular across the globe. Apart from this, the population explosion witnessed in the emerging economies along with rise in the per capita income of middle income group population in these economies has transformed into lucrative demand for consumer items like ceramics, pharmaceuticals, and ceramics. This will propel the product demand. In addition to this, the thriving manufacturing as well as service sectors will propel the market growth. Furthermore, North America and Latin American regions have huge market growth potential and are likely to exhibit incredible surge over the forthcoming years. Municipal Waste Treatment

Municipal Solid Waste management is one of the most vital issues in the contemporary urban environments particularly in developing countries. The estimated quantity of Municipal Solid Waste (MSW) generated worldwide is 1.7-1.9 billion metric tons. In many cases, municipal wastes are not well managed in developing countries, as cities and municipalities cannot cope with the accelerated pace of waste production and waste collection rates are often lower than 70 percent in low-income countries. collected waste is often disposed of through uncontrolled land filling and about 15 per cent is processed through unsafe and informal recycling.

The global waste management market size is expected to reach \$530.0 billion by 2025 from \$330.6 billion in 2017, growing at a CAGR of 6.0% from 2018 to 2025. Waste management is the process of treating solid wastes, and involves different solutions to recycle items. It includes activities from its inception to final removal, such as collection, transport, treatment, and disposal of waste along with inspection and regulation.

Increase in environmental awareness, rapid industrialization, surge in population, and rise in urbanization foster the growth of the global waste management market. In addition, implementation of stringent government norms toward open dumping is expected to fuel the waste management market growth.

The market includes domestic consumables mainly furniture, product packaging, clothing, grass clippings, bottles, newspapers, food scraps, and appliances. These scraps mainly originate from several schools, homes, hospitals, and other commercial establishments. The demand for municipal solid waste management across the residential sector will witness significant gains on account of the ongoing urbanization along with increasing consumer spending toward manufactured goods. IV Fluids (BFS Technology)

Intravenous fluids are fluids which are intended to be administered to a patient intravenously, directly through the circulatory system. These fluids must be sterile to protect patients from injury, and there are a number of different types available for use. Many companies manufacture packaged intravenous fluids, as well as products which can be mixed with sterile water to prepare a solution for intravenous administration.

Fluids are given when someone's body fluid volume falls. There are a number of things which can cause a drop in fluid volume. Vomiting and diarrhea are a classic exam-

ple, which is why people are encouraged to drink fluids when they are sick, to keep their fluid volume stable. Another cause is blood loss, which causes problems both because people lose blood products, and because they experience a loss in fluid volume. Electrolyte levels in the blood can also become unstable as a result of rapid changes in fluid volume, in which case intravenous fluids can be used to restore the balance.

The market for Intravenous (IV) Solution is expected to reach USD 11,511.2 million by 2022 and is expected to grow at a CAGR of 7.69% during the forecast period 2016-2022. The factors which drive the growth of the market are the rising prevalence of chronic diseases, rising acceptance of vitamin C intravenous treatment therapy to treat colorectal cancer.

Intravenous (IV) solutions are fluids which are intended to be administered to a patient directly into the venous circulation. These fluids are sterile fluids which protects patients at the time of serious dehydration. There are various type of IV solutions available for use in the market. Mining of Mineral Ore with Processing and Beneficiation for Production of Red Iron Oxide

Iron & steel is the driving force behind industrial development in any country. The vitality of the Iron & Steel Industry largely influences a country's economic status. The mining of iron ore, an essential raw material for Iron & Steel Industry, is arguably of prime importance among all mining activities undertaken by any country. With the total resources of over 33.276 billion tonnes of hematite (Fe₂O₃) and magnetite (Fe₃O₄), India is amongst the leading producers of iron ore in the world.

Global iron ore production will modestly grow to 3,119 million tonne by 2028 from 2,850 million in 2019, Fitch Solutions Macro Research said in a report today. This represents an average annual growth of 0.5 per cent during 2019-2028, which is a significant slowdown from an average growth of 2.9 per cent during 2009-2018, it said. The supply growth would be primarily driven by India and Brazil where major miner Vale is set to expand output with its new mine. On the other hand, miners in China, which operate at the higher end of the iron ore cost curve will be forced to cut output due to fall in ore grades.

The primary use of iron ore is in the production of iron. Most of the iron produced is then used to make steel. Steel is used to make automobiles, locomotives, ships, beams used in buildings, furniture, paper clips, tools, reinforcing rods for concrete, bicycles, and thousands of other items.

It is the most-used metal by both tonnage and purpose. Steel is a processed form of pig iron with impurities such as silicon, phosphorus and sulfur removed and with a reduction in the carbon content. Globally, steel's versatility is unsurpassed. Wrought iron (low carbon) and cast iron (pig iron) also have important markets. One of the most ubiquitous products in Australia is corrugated iron, a structural sheet steel shaped into parallel furrows and ridges. Spices (Turmeric, Chilli & Masala Powder)

Spices are non-leafy parts (e.g. bud, fruit, seed, bark, rhizome, bulb) of plants used as a favoring or seasoning, although many can also be used as a herbal medicine. A closely related term, 'herb', is used to distinguish plant parts finding the same uses but derived from leafy or soft flowering parts. The two terms may be used for the same plants in which the fresh leaves are used as herbs, while other dried parts are used as spices, e.g. coriander, dill.

Total spices export from India stood at 226,225 tonnes valued at US\$ 621.78 in April-June 2016, registering a year-on-year growth of 3 per cent. Major importers of Indian spices in FY 2015-16 were US, China, Vietnam, UAE, Indonesia, Malaysia, UK, Sri Lanka, Saudi Arabia, and Germany. Worldwide, food trends are changing with a marked health orientation. Since organic foods are free from chemical contaminants, the demand for these products should steadily increase in the new millennium. Organic cultivation is nothing new to India.

India is the largest producer, consumer and exporter of spices and spice products in the world and produces more than 50 spices. India is also a big exporter of Chilli, turmeric, cumin, pepper and many other spices. The country also imports various spices to meet its local requirement of taste as Indian dishes are incomplete without adding varieties of spices to them. Andhra Pradesh is the largest spice producing state in India. Gujarat, Karnataka, Rajasthan, Tamilnadu, Assam, Kerala, Madhya Pradesh, Maharashtra, Orissa, Uttar Pradesh and West Bengal are the other major spices producing states in India. Chilli is the major spice crop occupying about 29 percent of area under cultivation and contributing about 34 percent of total spices production in the country. Turmeric accounts for 14% of production and 6% of area, while garlic accounts for 19% of production and 5% of area. Seed spices contribute 17% of production and occupy 41% of area while pepper contributes 2% of production and occupies 9% of area of the total spices in the country. PET Polyester Acoustic Panel

Acoustic panels control echo and reverberation in a room. Most commonly used to resolve speech intelligibility issues in commercial soundproofing treatments. Most panels are constructed with a wooden frame, filled with sound absorption material (mineral wool,

fiberglass, cellulose, open cell foam, or combination of and wrapped with fabric. Acoustic Panels are also referred to as Sound Absorption Panels, Soundproof Panels, or Sound Panels.

Asia Pacific will witness the fastest growth with a CAGR at 5% in the acoustic insulation market by 2025. Rising disposable income coupled with extensive product utilization in the building & construction, industrial, and transportation segments in the region are key factors driving industry growth. Surging government investments in numerous industrial & commercial projects pertaining to fire and sound absorption will stimulate the market share. Rapid surge in infrastructural activities along with the growing noise pollution in several metropolitan cities will proliferate the acoustic insulation market demand in the region.

Growing demand for sound absorption materials in the entertainment industry including music studios, corporate workplaces, cinema halls, and auditoriums will provide a positive scope for acoustic insulation market penetration during the forecasted timeframe. Increasing focus for improving the building infrastructure to offer peaceful and convenient environment in public places has led to a rise in installation of sound barriers across the highways, construction sites, airport runways, railway stations etc. Further, constructive indicators from the work-out centres, gyms, industrial sound absorption, control rooms, cabinets, and shipbuilding segments hold potential opportunities for the product growth globally. Dental Materials Alginate, GI Cement, Composite Resin & Polycarboxylate Cement

A dental impression is a negative imprint of hard (teeth) and soft tissues in the mouth from which a positive reproduction (cast or model) can be formed. It is made by placing an appropriate material in a stock or custom dental impression tray which is designed to roughly fit over the dental arches.

On the basis of products, the market is divided into radiology equipment, lasers, systems & parts, laboratory machines, hygiene maintenance device, and other equipment. Systems & parts held the largest share in the product segment and accounted for USD 2,206.2 million in the overall market in 2013. Wide applications of systems & parts conducting any procedures attributed to the dominance of systems & parts segment. Dental lasers are expected to grow at a CAGR of over 8.2% from 2013

to 2020. Growth in demand for cosmetic dentistry and minimally invasive procedures is expected to boost the growth in this segment over the forecast period.

Patient demand for better dental care facilities has increased due to increasing dental awareness and growing disposable income of the people around the world. Furthermore, factors like rising geriatric population, changing lifestyles, increasing incidences of dental caries and other periodontal diseases, rising demand for cosmetic dentistry, and increased

public and private health care expenditure are persistently driving the dental care market.

Asia-Pacific is expected to show lucrative growth over the forecast period owing to increased demand as a consequence of large population base with high unmet medical needs. Adoption of innovative instruments and techniques is expected to further propel the growth of this region. Furthermore, improving healthcare infrastructure as a result of government initiatives is expected to fuel growth of Asia Pacific region. As a whole any entrepreneur can venture in this project without risk and earn profit.

Adult Diapers and Baby Diapers

A diaper or nappy is a kind of underwear that allows one to defecate or urinate in a discreet manner. When diapers become soiled, they require changing; this process is often performed by a second person such as a parent or caregiver.

The diaper industry in India has grown with a CAGR of more than 20% over the last five years from 2011-12 to 2016-17. The diaper market largely consists of baby diapers in India with more than 95% volume share whereas adult diapers have just started their foray into the mainstream market.

Further, it is anticipated that the Diaper market is expected to reach around INR 200 Billion by 2022, growing at a double digit CAGR over the forecasted period 2017-2022.

Disposable diapers market would garner substantial market share of about 63% of the estimated global market by 2020. The changing environmental needs would limit the use of disposable diaper in the future, promoting the usage of bio-degradable diapers. The companies operating in this market are focusing on manufacturing cost effective and skin friendly diapers that will cater to the customers with pressing demands for quality and cost effectiveness.

The current population growth rate shows that there is a demand for diapers and nappies in households, particularly considering the increase in the workforce prompting

Hot Melt Glue Stick

Hot melt adhesive is special kind of adhesives, which can be used at high temperature and adhesion properties remain unchanged on cooling. Hot melt adhesives basically formed by compounding of synthetic polymeric resin. Synthetic polymeric resins are used polyvinyl acetate, Polyethylene acetate, Urea formaldehyde etc.

Hot Melt Adhesives Market size exceeded USD 6.60 billion, globally in 2018 and is estimated to grow at over 6.4% CAGR between 2019 and 2026. Automobile application segment held the highest share in 2018, and is expected to maintain its dominance throughout the forecast period.

Hot melt adhesives demand is attributed towards rising importance regarding disposable hygiene products and growing government initiatives to promote health & wellness among individuals. With increasing awareness for personal hygiene, consumers are looking for products with enhanced features such as

better absorption and improved softness which has augmented the adoption of environment friendly disposable adhesives.

The hot melt adhesives market offers an effective solution for carton closing, sealing and play a significant role in overcoming challenges such as energy efficiency and product safety. This has further enhanced its usage in food, beverage & other consumer goods packaging applications. The Adhesive Technologies business unit is a leading solution provider for adhesives, sealants and functional coatings for consumers, craftsmen and industrial applications. Henkel offers a multitude of applications to satisfy the needs of different target groups: consumers, craftsmen and industrial businesses. In 2019, the business unit generated sales of 9,461 million euros, 47 percent of total company sales. As a whole any entrepreneur can venture in this project without risk and earn profit.

Beer & Wine

Beer is the world's oldest beverage, possibly dating back to the 6th millennium BC. It is also the most widely consumed alcoholic beverage and the third most popular drink overall after water and tea. Produced by the brewing and fermentation of starches, mainly derived from cereals — the most common of which being barley. Beer forms part of the culture of many nations, and has acquired various social traditions and associations. Beer is consumed in countries all over the world.

Today, the brewing industry is a global business, consisting of several dominant multinational companies and many thousands of smaller producers ranging from brewpubs to regional breweries. Among the alcoholic drinks, Beer is quite common and popular in almost every Country of the World. People of different Countries take beer in varying much like a soft drink in European Countries it is just a substitute of water. The alcoholic contents and main source stuff also keep varying according to the tests of the major part of population of the particular country although it is a fashion to ask for beer of every origin in every Country.

The Global Beer Market was valued at \$593,024 million in 2017, and is projected to reach \$685,354 million by 2025, growing at a CAGR of 1.8% from 2019 to 2025. The origin of beer dates to the early Neolithic period, and is one of the oldest and the most consumed alcoholic beverages in the world.

Dairy Farming & Dairy Products (Milk, Butter, Ghee & Paneer)

Dairy farming has been part of agriculture for thousands of years, but historically, it was usually done on a small scale on mixed farms. Specialist scale dairy farming is only viable where either a large amount of milk is required for production of more durable dairy products such as cheese, or there is a substantial market of people with cash to buy milk, but no cows of their own.

The global dairy products market is expected to grow at a CAGR of 5.2% from 2019 to reach \$645.8 billion by 2025. Dairy is defined as a business enterprise that deals with the processing and harvesting of animal milk for human consumption. Some of the common milch animals

include cow, goat, buffalo, camel and sheep. The milk obtained from these animals can be consumed directly and processed into ice cream, cheese, paneer, butter, ghee, condensed milk and yogurt. These products offer various nutrients such as calcium, proteins, zinc, magnesium, and vitamin D and B12. With widespread demand for dairy products and their proactive function in the global food industry, dairy plays a crucial role in the growth of the economies worldwide. Over the years, the dairy industry has witnessed improvements in product safety through specialization, modernization and consolidation. Moreover, advancements in global trade have also influenced the profitability of dairy farms.

India has the highest live-stock population in the world with 50% of the buffaloes and 20% of the world's cattle population, most of which are milch cows and milch buffaloes. India's dairy industry is considered as one of the most successful development programs in the post-Independence period. India is the world's largest milk producer, accounting for more than 13% of world's total milk production. As it is the world's largest consumer of dairy products, but consuming almost 100% of its own milk production. Dairy products are a major source of cheap and nutritious food to millions of people

Groundnut Oil

Groundnut oil is a vegetable oil derived from groundnuts. It is also called peanut oil. The oil has a strong peanut favor and aroma. It is often used in American, Chinese, South Asian and Southeast Asian cuisine, both for general cooking, and in the case of roasted oil, for added favor.

However, the high production cost of peanut oil is a major factor expected to restraint growth of the target market in the near future. In addition, high consumption of peanut oil results in various side effects in human health which is one of the major factors expected to hamper growth of the target market to a certain extent. Global peanut oil market is set to witness a steady CAGR of 4.25% in the forecast period of 2019- 2026.

Cooking oil is an important and essential item in the FMCG sector. An average Indian consumes 15 Kg of oil in a year. Compared to other oils like sunflower oil, cottonseed oil, and soy oil, groundnut oil has more nutritional value. In addition to cooking, groundnut oil is used in the bakery and confectionery industry. Groundnut oil is used in soaps, salad oils, mayonnaise, etc. Groundnut oil is expensive compared to other oils. It has more vitamins, minerals, nutritional value and low levels of cholesterol. It is also suitable edible oil for Indian cooking.

In India, groundnut is cultivated in 5.8 million hectares.

Gujarat is the highest producer of groundnut oil in India. Groundnut seed contains 50-55% of the oil. It is one of the best oil seeds to extract oil from. As a whole any entrepreneur can venture in this project without risk and earn profit.

Nicotine from Tobacco Waste

Nicotine is a natural product of tobacco, occurring in the leaves of Nicotiana tabacum in a range of 0.5 to 7.5% depending on variety. Nicotine is also found in the leaves of Nicotiana rustica, in amounts of 2-14%; in Duboisia hopwoodii and in Asclepiassyriaca.

Nicotine is a widely used stimulant and potent par sympathomimetic alkaloid that is naturally produced in the nightshade family of plants. It is used for smoking cessation to relieve withdrawal symptoms.

Indian Tobacco Board has authorized an NLS 2020 crop size of 46 million kilos. However, a crop size 42 million kgs is anticipated which was transplanted in 17,000 hectares and 90% of the crop has been harvested. The average market price is expected to be USD 2.30 for this year.

In India, production of Flue-Cured Virginia (FCV) tobacco – a variety used in Cigarettes, accounts for around 30% of total tobacco produced in India. India is the 3rd largest producer of FCV tobacco in the world with an annual production of around 240 million kgs. The implementation of Tobacco control measures and higher production of Tobacco is expected to ease the situation in the future and more raw material

containing higher percentage of nicotine will be available in future to the Nicotine and other alternate tobacco product manufacturers in the future.

However, in India, the product of nicotine alone is not enough to meet the growing demand. Most of its demand is met by imports. Nicotine is one of important alkaloid

The Complete Book on Printing Technology
with Process Flow Diagrams, Plant Layouts and Machinery Details (Offset, Gravure, Flexographic, Security, Web Offset and Pad Printing) 2nd Revised Edition
This is the age of hi-fi, jets and computers. Rapid advancements in science and technology have made their impact on the printing industry of the world too. The old techniques of printing have become obsolete and made way for the new technology. The book contains the latest printing processes like web, gravure, flexo, security and offset printing. ₹ 1695 US\$150

Modern Technology of Pulp, Paper and Paper Conversion Industries
The paper conversion sectors are assuming increasingly important place in the life of every nation. Conversion technology is being evolved continuously for having better conversion, handling, transportation, preservation and usage of materials. Paper and Pulp Industry plays a vital role towards conversion. In view of the close linkage between paper and conversion industry we have tried to come out with this unique book containing relevant and useful information in both these industries. We have tried to make it most exhaustive first giving details, then presenting and dividing in different chapter to understand better. Thus we have tried to fill the vacuum that existed till now. ₹ 1000 US\$100

The Complete Technology Book on Pulp & Paper Industries
The pulp and paper industry continues to expand at a phenomenal rate. This imposes a difficult problem of selection. Since the amount of material that can be included in a single volume is obviously limited. Careful thought has been given to the selection with the purpose of presenting that material which will be of greatest interest to the greatest numbers. ₹ 1100 US\$125

Handbook on NATURAL DYES for INDUSTRIAL APPLICATIONS
(Extraction of Dyestuff from Flowers, Leaves, Vegetables) 2nd Rev. Edn.
This is a single book which has information related to extraction of dyestuffs from 19 common flowers, weeds, bark of leaves and its application on cotton silk and wool fabrics for textile industry. The book describes the step wise methodology of extraction, mordanting and dyeing with photos of the actual plants part used for extraction of Natural dye. Shade cards have been incorporated so that the full gamut of colors can be visualized from each dyestuff. The Author Dr. Padma S Vankar, works as Principal Research Scientist, in Facility for Ecological and Analytical Testing (FEAT) at Indian Institute of Technology, Kanpur. She has been engaged in the screening and characterization of newer natural dyes for the past 10 years. She also works in the area of designing synthetic strategies for Ecofriendly dyes using microwave heating system. Using innovative technology for natural dyeing has been her main emphasis. The author has conducted several workshops throughout India in order to popularize natural dyeing. ₹ 1575 US\$150

The Complete Technology Book on Textile Processing with Effluent Treatment
The Book covers complete details of textile processing with the standard parameters of effluents treatment which is the burning problem for the textile processors. ₹ 1000 US\$100

The Complete Technology Book on STARCH AND ITS DERIVATIVES
Starch is a group of poly saccharides, composed of glucopyranose units joined together by glycosidic linkages. Industrially, starch is broadly divided in to two types of viz natural and modified. The characteristics of the natural starches are changed by chemical or enzymatic reaction and the products of these reactions are termed modified starches. Starch can be obtained from maize, sorghum, roots and tubers such as tapioca, arrow root, potatoes etc. ₹ 1100 US\$125

Modern Technology of Textile Dyes & Pigments (2nd Rev. Edn.)
This is one of the best books on Textile Dyes and Pigments covering Formulae, Manufacturing Processes of various Textile Dyes and Pigments. This book will be very helpful to new entrepreneurs, researchers, general information seekers and libraries or those who wants to diversify in this field. ₹ 1675 US\$150

The technology of glass ceramics are now a day wide field involving a great variety of raw materials, manufacturing processes, as well as products, and of considerable diversity in theoretical background. The manufacture of traditional glasses and ceramics is based on the utilization of the most widely occurring natural raw materials. The efforts have been made to provide maximum and latest information about processing of glass and ceramics and their products in this book. Rs 1495 US\$150

chemical having various applications. Its major use is found as insecticide for various fruits & vegetables. Nowadays the nicotine is sold in the market as nicotine sulphate 40 % concentration. In agriculture it is used in the form of nicotine sulphate solution to control different pests and fungi in crops. Being a potential pesticide obtained from natural resources, it has a very good market potential in the agricultural sectors. As a whole any entrepreneur can venture in this project without risk and earn profit.

Disposable Nitrile Gloves

Nitrile gloves are a type of disposable gloves made from synthetic rubber, this means there is no risk of latex allergies. They are the most popular gloves type in our range and offer superior strength, dexterity and resistance to oils and aqueous chemicals in comparison to vinyl or latex. For these reasons, they are often used in the medical, laboratory and manufacturing industries.

The Global Rubber Gloves market is expected to grow at a CAGR of 8.5% between 2014 and 2022. The factors such as rising healthcare expenditure, increasing health threats and increasing hygiene awareness and healthcare regulations are driving the market growth.

The Indian market for medical gloves is still evolving. While the global market is growing at a compound annual growth rate (CAGR) of two per cent, the Indian market is at seven per cent growth. Every day there is a new hospital or nursing home popping up in India, so the demand for medical gloves is expected to increase. Medical tourism is also driving the growth of this product category in our country. The market size therefore only for gloves in India is Rs 300 crore. In view of all this, there is a good scope to initiate small-scale rubber gloves manufacturing unit.

“The glove industry has become very innovative and has gone into technological transformation. Nonetheless, we need the support of the Government to facilitate the transformation. Innovation comes from talent and hence people skills. With the right talent pool, the industry is set to see better prospects in the years ahead. As a whole any entrepreneur can venture in this project without risk and earn profit.

Toothpaste

Toothpaste is a paste or gel to be used with a toothbrush to maintain and improve oral health and aesthetics. Since their introduction several thousand years ago, toothpaste formulations have evolved considerably—from suspensions of crushed egg shells or ashes to complex formulations with often more than 20 ingredients. Among these can be compounds to combat dental caries, gum disease, malodor, calculus, erosion and dentin hypersensitivity.

The global toothpaste market is projected to grow at a CAGR of 6.1% during the forecast period. The toothpaste market was valued at USD 26.09 billion in 2018, and it is projected to reach USD 36.98 billion by 2024. Increasing dental problems among children and adults, due to poor eating habits, and the rise in popularity for herbal oral care products are the factors primarily driving the global toothpaste market.

The growth in India's oral hygiene industry is mostly influenced by changing consumer Behaviour, companies' business strategies, govt. policies and the increasing entrance of various leading international brands in the Indian market. With rising disposable income and changing tastes and lifestyle, consumers are trading-up for expensive premium products. The mass product market has also expanded on account of increasing population with the emergence of middle class. Image consciousness and oral health awareness has led to increased demand for advance oral care products. As a whole any entrepreneur can venture in this project without risk and earn profit.

Active Pharma Ingredients (API) (Cephalexin, Ampicillin Trihydrate, Ibuprofen and Paracetamol)

The Active Pharmaceutical Ingredient (API) is the part of any drug that produces the intended effects. Some drugs, such as combination therapies, have multiple active ingredients to treat different symptoms or act in different ways. The global demand of APIs include ageing population, rising expenditures on healthcare, increasing prevalence of lifestyle diseases, etc. Looking forward, the market value is projected to reach US\$ 258.8 Billion by 2025, exhibiting a CAGR of 5.6% during 2020-2025. The API market is competitive in nature and is becoming increasingly competitive. Consequently, manufacturers are required to enhance products in order to gain advantage over previously marketed products.

India is the seventh largest country in the world and has the second highest population. It has a parliamentary democratic form of government and has abundant natural resources and sufficient oil reserves. The country has a huge skilled, English-speaking, and inexpensive labor force. Its young population and current economic policies have made it one of the largest recipients of FDI in the world. Asia Pacific is expected to be the fastest-growing market over the forecast period. Owing to the availability of affordable labor, major companies in the market are setting up API manufacturing plants in developing countries such as China and India.

India's reliance on pharma ingredient imports has risen over the past few decades due to the higher cost of domestic production, with the price gap reaching as much as 20%-30%, particularly for energy-intensive fermentation-based ingredients used in anti-infectives. Import dependence is more than 90% for some life-saving drugs, including penicillin and ciprofloxacin. As a whole any entrepreneur can venture in this project without risk and earn profit.

BOOKS ON RUBBER, FIBRE/OPTICAL GLASS, PLASTIC, POLYMERS, PETROLEUM GREASES, PETRO CHEMICALS, WAX, POLISHES & CHEMICAL INDUSTRIES

The Complete Technology Book On PESTICIDES, INSECTICIDES, FUNGICIDES & HERBICIDES with Formulae & Processes

Pesticides, Insecticides, Fungicides and Herbicides are used in agriculture, forestry, animal husbandry, commercial centers and houses for the pest control. During last 35 years, consumption of these products has increased manifold and industries are coming up throughout the world due to its increasing demand. The book contains formulae, processes of different types of pesticides, insecticides, fungicides and herbicides. Rs.1100 US\$125

The Complete Book on Distillation and Refining of Petroleum Products

The most dynamic industry of the century is the petroleum and petrochemicals industry. It has taken the fundamental knowledge of chemistry and chemical engineering and transformed itself from a simple processing industry for fuel and lubricants to an extremely complex chemical process industry which has branched out into synthetic rubber, plastics, fertilizers and many other fields. The book presents Practical information and data which will help oil companies, large scale users of commercial petroleum products in efficient storage, handling and utilization of these products. Different formulae, processes for the production of petroleum products are given in this book. Rs.975 US\$100

DRUGS & PHARMACEUTICAL TECHNOLOGY HANDBOOK

India has come a long way in the field of manufacture of Drugs and Pharmaceuticals. From a country importing more than 95% of its requirement of Drugs and Pharmaceuticals, India now is exporting it even to developed countries. The modern Indian Pharmaceutical Industry is recent and its foundation was laid in the beginning of the current century. The pharmaceutical industry can be broadly categorised as Bulk Drugs, Formulations, IV Fluids and Pharmaceutical Aids (such as medical equipment, hospital disposables, capsules, excipients etc. Special feature of the pharma industry is a large number of manufacturers in the small scale sector. The government is also encouraging the SSI sector providing some incentives. Rs.1075 US\$125

The Complete Book on Medical Plastics

The use of plastics in health care field encompasses several distinct markets. Plastic is used on a large scale as medical devices like disposable syringes, optical and dental products, heart valves, contact lenses and many more medical products. This way plastic has very importance in making medical devices. The present book contains the important information of plastics in medical field and their uses in various ways. Rs.975 US\$100

The Complete Book on RUBBER PROCESSING AND COMPOUNDING TECHNOLOGY (with Machinery Details) 2nd Rev. Edn.

Rubber products industry is an important resource based industry sector in India. Over the last decade the rubber industry has witnessed a steady and strong growth. Rubber can be deformed to a high degree of strain in a reversible manner and this special property finds use in fields as diverse as transportation, material handling, health care, and sport and leisure activities. The book covers manufacturing processes of rubber products, compounding of rubber, quality assurance, applications etc. Rs.1875 US\$150

The Complete Technology Book on Synthetic Resins with Formulae & Processes

Some of the fundamentals of the book are electrodepositable pigmented coating compositions based on alkyl resins, phosphorus containing allyl resins, vapour permeation cure technology, characterization of water soluble anodic electrode positive pigmented coating compositions, protection of concrete substrates, zinc rich coatings, electro deposition primers, developments in thermosetting powder coatings, application of powder coatings, polyethylene glycol, petroleum recovery and processing, industries using polyethylene glycols, silicones resins, preparation & formulation of silicone resin based coatings, pigments and dyes etc. Synthetic Resins are used by lot of industries. ₹1150 US\$125

The Complete Technology Book on Industrial Polymers, Additives, Colourants and Fillers

It is well known that the major consumption of additives is in PVC compounds. Approximately 80% of additives are being used in PVC, however the latter or 20% is consumed in compounding of other thermoplastics. Plastic master batches and fillers have their own importance in plastic processing industries. The present book through light on processing of industrial polymers, additives, colourant and fillers. Rs.1100 US\$125

Synthetic Resins Technology Handbook

The book basically deals with new raw materials for cost reduction of alkyls and unsaturated polyester, amino resins, polyester based resins, enzymatic synthesis of phenolic copolymers, radiation curable hybrid formulation, self polishing anti fouling, epoxy resins, epoxy resins from methyl epichlorohydrin, fillers, reinforcements, and other additives, cardanol modified epoxy resins, baking coatings from epoxy derived from cardanol, phenolic resins, polyurethane resins, aqueous polyurethane dispersion technology, heat resistant resins, etc. ₹1100 US\$125

Handbook on Manufacture of Acetophenone, Alcohols, Allethrin, Anthracene, Barium Potassium Chromate Pigment, Calcium Cyanamide, Carboxymethylcellulose, Carotene, Chlorophyll, Chemicals from Acetaldehyde, Fats, Milk, Oranges, Wood, Manufacture of Dye Intermediates and Dyes, Fine Chemicals, Formaldehyde, Granulated Fertilizers, Granulated Triple Superphosphate and Hydroquinone Rs.1100/- US\$125

Manufacturing of Petroleum Products

(Petroleum Waxes, Greases and Solid Lubricants, Solid Fuels, Gaseous Fuels, Gasoline, Diesel Fuel Oils, Automotive, Diesel and Aviation Fuels, Lubricating Oils and Lubricating Greases)

₹1675/- \$150-

Petroleum & Petroleum Products Technology Handbook

(Thermal Cracking of Pure Saturated Hydrocarbons, Petroleum Asphalts, Refinery Products, Blending and Compounding, Oil Refining and Residual Fuel Oils)

₹1875/- \$150-

Epoxy Resins Technology Handbook

(Manufacturing Process, Synthesis, Epoxy Resin Adhesives and Epoxy Coatings) (2nd Rev. Edn.)

The major contents of the book are synthesis and characteristics of epoxy resin, manufacture of epoxy resins, epoxide curing reactions, the dynamic mechanical properties of epoxy resins, physical and chemical properties of epoxy resins, epoxy resin adhesives, epoxy resin coatings, epoxy coating give into water, electrical and electronic applications, analysis of epoxides and epoxy resins and the toxicology of epoxy resins. ₹1895 US\$150

Phenolic Resins Technology Handbook (2nd Rev. Edn.)

This book basically deals with general reaction of phenols with aldehydes, the resoles, curing stages of resoles, kinetics of a stage reaction, thermosetting alloy adhesives, vinyl phenolic structural adhesives, nitrile phenolic structural adhesives, phenolic resins in contact adhesives, chloroprene phenolic contact adhesives, nitril phenolic contact adhesives, phenolic resins in pressure sensitive adhesives, rubber reinforcing resins, resorcinol formaldehyde latex systems, phenolic resin chemistry, bio-based phenolic resins, flexibilization of phenolic resins, floral foam (Phenolic Foam) with resin manufacturing, lignin-based phenol formaldehyde (LPF) resins, phenol formaldehyde resin, alkaline phenol formaldehyde resin, furfuryl alcohol phenol urea formaldehyde resin, phenol formaldehyde resin (Shell Sand Resin), phenol formaldehyde resin (Cold Box Resin). ₹1895 US\$150

Alkyd Resins Technology Handbook

This book contains alkyd formulation, modification of alkyds, styrene copolymers in alkyd resins, copolymerization of alkyl silicone, polyblends of polystyrene glycol and alkyd in surface coatings, alkyd calculations, and alkyd monograms. This book will find very helpful to all its readers, entrepreneurs, scientists, technical institution, existing industries, paint technologist etc. ₹1000 US\$125

Modern Technology of Synthetic Resins & Their Applications

(Acetal, Acrylonitrile, Alkyd, Amino, Casein, Cashewnut Shell Liquid, Epoxy, Phenolic, Polyamide, Polyurethane, Rubber, Silicon, Polyvinyl Acetate, Shellac, Sucrose, Terpene Resins) (2nd Revised Edition)

The major contents of the book are properties, manufacturing process, formulae of synthetic resins and applications of synthetic resins, derivatives of resins, use of resins in polymer field, alkyd resin technology, epoxy resins, manufacture of polystyrene based ion-exchange, phenol formaldehyde reactions, polystyrene glycol and alkyd in surface coatings, synthetic rubbers, modification with synthetic resins, water-soluble polymers, cross-linking of water-soluble coatings etc. ₹1575 US\$150

Modern Technology of Petroleum, Greases, Lubricants & Petro Chemicals Lubricating Oils, Cutting Oil, Additives, Retining, Bitumen, Waxes with Process and Formulations) 3rd Rev. Edn

Lubricants, Greases and petrochemicals are most versatile on the industrial Plateau now a days. The significance of Lubricants, Greases & speciality products in the day-to-day functioning of nearly every machine part, instrument, appliance & device can not be over emphasized lubricants reduce friction & wear between rubbing parts, thereby enhancing their life. The basic object of this book is to furnish comprehensive information about nearly all prominent types of Lubricants, Greases & Petrochemicals. This book covers formulae, processes of various petroleum items. ₹1995/- US\$150-

Industrial Chemicals Technology Hand Book

The book contains manufacturing processes, reactions, equipments details, process flow diagram of number of chemicals, which have huge industrial uses. This book is very useful for new entrepreneurs, industrialists, consultants, research scholars, technical institutions, chemists and libraries. Rs.1100 US\$125

Lubricating Oils, Greases and Petroleum Products Manufacturing Handbook

The major content of the book are Food and Technical Grade White Oils and Highly Refined Paraffins, Base Oils from Petroleum, Formulation of Automotive Lubricants, Lubricating Greases, Aviation Lubricants, Formulation and Structure of Lubricating Greases, Marine Lubricants, Industrial Lubricants, Refining of Petroleum, Lubricating Oils, Greases and Solid Lubricants, Refinery Products, Crude Distillation and Photographs of Machinery with Suppliers Contact Details. Rs.1475 US\$150

The Complete Technology Book on Expanded Plastics, Polyurethane, Polyamide and Polyester Fibres

Expanded plastics are also known as foamed plastics or cellular plastics. Expanded plastics can be flexible, semi flexible, semi rigid or rigid. They can also be thermoplastic or thermosetting and can exist as open-celled or closed-celled materials. The Polyurethanes are among the most recent additions to the many commercially important classes or polymers. Urethanes can be considered esters of the unstable carbamic acid or amide esters of carbonic acid. The present book covers processes of expanded plastics, polyurethane polyamides with other related information required by an entrepreneur. Rs.1275 US\$125

The Complete Technology Book on Wax and Polishes

Wax and polishes are used for many purposes. Wax has their principal use in waterproofing. Some other important uses are in candles, polishes, electrical insulation, coatings and carbon paper. There are various types of polishes having industrial and domestic applications. The purpose of this book is to present a comprehensive information of different types of wax and polishes like their processing, properties and uses. Rs.1675 US\$150

Handbook of FINE CHEMICALS, VITAMINS, AMINO ACIDS AND PROTEINS

Rs.1450 US\$150

Handbook on Pet Film and Sheets, Urethane Foams, Flexible Foams, Rigid Foams, Specialty Plastics, Stretch Blow Moulding, Injection Blow Moulding, Injection and Co-Injection Preform Technologies

Rs.1275 US\$125

The Complete Technology Book on POLYMER (with Processing & Applications)

Rs.1100 US\$125

Wax Polishes Manufacturing Handbook

Rs.1675/- \$150-

DAIRY PRODUCTS, POULTRY INDUSTRIES

The Complete Technology Book On Dairy & Poultry Industries (With Farming & Processing) 2nd Revised Edition

The first book of its kind which cover complete details of dairy & poultry farming, processing, how to feed cows, birds in dairy and poultry, kind of diseases and their cure and other information related to farming. ₹1275 US\$125

MODERN TECHNOLOGY OF MILK PROCESSING & DAIRY PRODUCTS 4th Rev. Ed.

This book is devoted solely to milk and its products. The book deals with processes, formulae, project profiles, details of plant machinery and raw materials with their resources etc. of various dairy products. ₹1475 US\$150

RABBIT, GOAT, SHEEP, POULTRY, FISH AND PIG FARMING WITH FEED TECHNOLOGY

Rabbit farming is no doubt very profitable wing to their short generation interval and their rapid prolificacy. The large demand for animal protein and fibre, the future for sheep meat and wool seems to be assured. Sheep rearing is the major source of livelihood to small and marginal farmers and landless labourers in hilly areas, arid and semi-arid region of India. Goat was believed to be the earliest ruminant, among livestock, species, to be domesticated by man in around 7600 B.C. probably due to its multipurpose utility to the human beings. Fish is a good source of animal proteins. Man has realized its importance from the very inception of the evolution of the human race. ₹1100 US\$125

Books & Directory on HERBAL, CULTIVATION, HERBAL PRODUCTS COSMETICS, AYURVEDIC MEDICINES

Herbal Cosmetics & Ayurvedic Medicines (EOU) (3rd Rev. Edn.)

This book is very useful for entrepreneurs, industrialists, project consultants, libraries etc. and has special reference for Herbal Cosmetics and Ayurvedic Medicines with formulae, processes, foreign buyers, Machinery with raw material sources, project profiles etc. **₹1475 US\$150**

The Complete Technology Book On Herbal Beauty Products with Formulations and Processes

Indian Medical System advocates the use of medicinal plants as drug source. Drugs obtained from plant origin occupy important position in different pharmacopoeist. Products from natural sources are an integral part of human health care system because of major concern about synthetic drugs and their side effects and toxicity. The ancient Indian system of medicine needs verification on modern scientific basis. An attempt to lend ancient and modern science as well as art could be fruitful and such attempts must be carried out on sound scientific basis. **₹1100 US\$125**

Hand Book On Unani Medicines

With Formulae, Processes, Uses And Analysis

Tremendous progress has been registered in the development of modern medicine. Yet, medicinal plants continue to be an important source of drugs throughout the world. Unani medicine is one of them. Plant as a source of drugs of much more important for the developing countries of Asia, Africa and South America. This publication is one of its kind which clearly indicates the usefulness of Unani medicine, shows how the plant secrets, preserve the natural secrets/harmones/juices which ultimately uses in Unani system of medicine. **₹1100 US\$125**

Herbal Cosmetics Hand Book (3rd Rev. Edn.)

This is the first book of its kind which contains formulae and processes of various herbal cosmetics like cosmetics for the skins, cosmetics for bath purpose, cosmetics for nails, cosmetics for hair, oral cosmetics, analysis of cosmetics, test methods, machinery and raw material suppliers etc. **₹1875 US\$150**

Hand Book on Ayurvedic Medicine With Formulae, Processes & Their Uses (2nd Rev. Edn.)

This is the first book of its kind which contains formulae and processes of different types of Ayurvedic medicines like Chum, Capsules, Cyruks, Sharbats, Pastes etc. Used in various diseases. **₹1475 US\$150**

Hand Book on Herbal Medicines

The book contains Formulae of different Herbal Medicines used in all kind of diseases. This is the first book of its own kind. **₹750 US\$100**

Hand Book On Herbal Drugs and Its Plants Sources

Medicinal plants have been used as a major source of therapeutic agents by human being for thousands of years. Ancient men obtained more than 90% of his medicaments from higher plants. However, the importance of plants as a source of drugs decreased to certain extent. In spite of the fact that synthetic drugs and antibiotics have improved the life expectancy of man, plants still constitute as one of the major sources of raw materials for drugs all over the world. This particular book clearly described the original source of such drugs, which is beneficial to scientists and scholars. **₹1000 US\$100**

Herbal Soaps & Detergents Hand Book

The book covers formulae, processes of different types of herbal soaps & detergents being used in daily life. This is the first book of its kind. **₹1275 US\$125**

Herbal Foods and Its Medicinal Values

Food has been a basic part of our existence. Through the centuries we have acquired a wealth of information about the use of food as a part of our community, social, national and religious life. It has been used as an expression of love, friendship and social acceptance without knowing the medicinal values of such food. This book for the first time reveals the exact medicinal characteristics and how it works and cures the different disease to make mankind healthy. **₹1275 US\$125**

Hand Book on Herbal Products

(Medicines, Cosmetics, Toiletries, Perfumes) 2 Vols

Both the volumes covers processes, formulations, analysis methods with the addresses of raw material and machinery suppliers, project profiles, list of manufacturers, exporters and overseas importers of various herbal medicines, cosmetic, perfumes and toiletries. The book also contains addresses of different Ayurvedic & Unani medicines research institutes. **₹1500 US\$220 (FOR BOTH VOLUMES)**

Handbook On Medicinal Herbs With Uses

Medicinal herbs are the local heritage with global importance. World is endowed with a rich wealth of medicinal herbs. The Variety and sheer number of plants with therapeutic properties is quite astonishing. Medicinal herbs have curative properties due to presence of various complex chemical substance of different composition, which are found as secondary plant metabolites, according to their composition, are grouped as alkaloids, glycosides, corticosteroids, essential oils etc. During the past decade, a dramatic increase in exports of medicinal herbs attests to worldwide interest in these products as well as in traditional health systems. The pharmaceutical industries have made massive investment on pharmacological, clinical and chemical researches all over the world in past five decades. Efforts have been made to discover still more potent plant drugs. **₹1075 US\$125**

Compendium of Medicinal Plants

The book contains systematic account of the most important plants used in medicines. Each chapter covers botanical descriptions, parts used, Ayurvedic properties, clinical uses, constituents with the figure of the plant. **₹875 US\$100**

Hand Book on Neem and Allied Products

The neem tree, which is also known as Margosa or Indian lilac, grown extensively in Asian and African countries. The need is very useful tree due to its medicinal and insecticidal properties and can be grown even under semi arid and subhumid conditions upto 700m above sea level. The book covers cultivation of neem and processing of its products. **₹975 US\$100**

Aloe Vera Handbook

(Cultivation, Research Findings, Products, Formulations, Extraction & Processing)

Aloe Vera is a semi tropical plant. There are over 250 species of Aloe grown around the world. It contains more than two hundred tonic ingredients including essential amino acids, minerals, vitamins, enzymes and steroids. Also contains the most essential components required by the human body. It is grown wild in hedgerows in dry soil conditions and almost all parts of India. It can be grown even under constant drought conditions.
